We're pleased to announce that we'll be having a panel discussion titled "**6040 In The Real World**" during the second half of this Skills Office Hours session. Details are below:

Format and Topics:

Panel members will be asked a series of questions related to how their 6040 experience affected their professional lives. We'll cover topics that directly applied, but will also focus heavily on other skills and any other indirect benefits as well. The members will also share more about their day-to-day at their jobs, thoughts on the general analytics space, and recommendations for anyone new entering the field.

Panel Members:

You've probably all interacted with these members at least a few times already. They've all been TA's for several semesters and have done outstanding work for the class in several different ways.

- TA attendees TBA

Outside of class they've been working in a variety of roles in a variety of fields including: Data Engineering, Analytics, and Data Science, although we may get deeper into the differences (real and arbitrary) during the panel.

Logistics:

- We will have an announcement post on Piazza with additional details.
- The session will be hosted during the Skills Office Hours, as normally done.
- The session will be recorded and recording link posted, again as normally done. This portion of the Skills OH session will be posted as its own separate recording.
- Live chat will be used for real-time question submissions.

Additional Questions & Topics:

We already have a short list of general questions and topics we're going to cover, so we're calling on you to suggest things that interest you below (add a follow-up). We ask that you post your questions on Piazza when we put the thread up for this forum.
